

Principelle **MATRIX**

MOISTURE MANAGEMENT

Hydration and absorption. No compromise: Matrix provides speedy wound bed preparation and effective moisture balance.

Matrix is a partially-hydrated superabsorbent copolymer dressing. Its unique design gives it an unparalleled breadth of ability to behave both as a hydrating and absorbing dressing. It has been formulated to closely mimic the water activity of healthy skin. It encourages wound bed preparation, yet is still able to cope with various levels of exudate. In high exuding scenarios it outperforms foams as a secondary absorbing dressing behind fibrous primary dressings. The result is a uniquely versatile and cost-effective wound dressing.

Principelle **MATRIX**

Quality of Life

Pain: Matrix offers clinicians an attractive tool for reducing pain in chronic wounds and during dressing change. A moist environment has a positive effect on inflamed tissue and nerve endings. The dressing is soothing upon application.

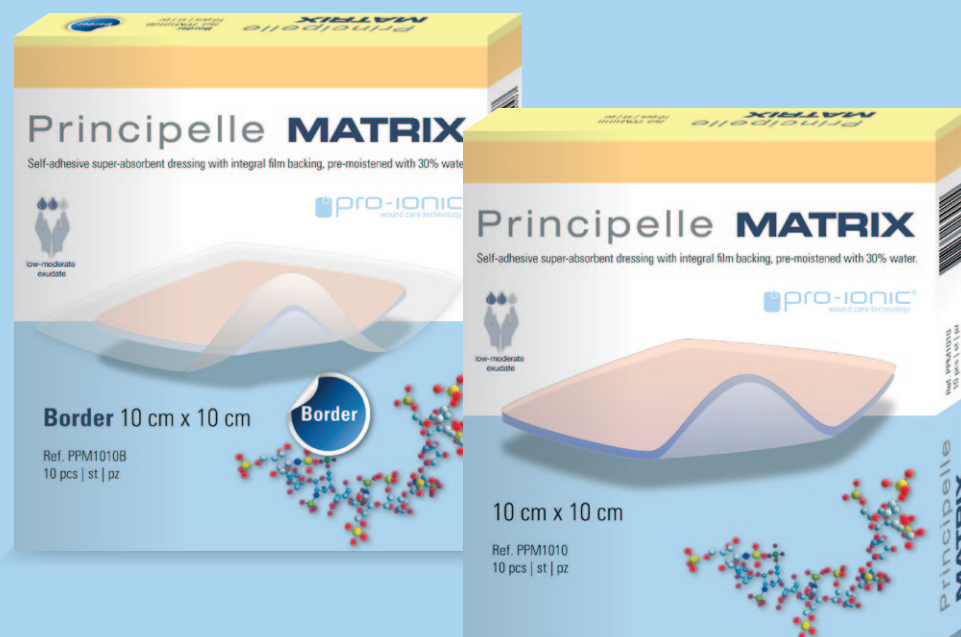

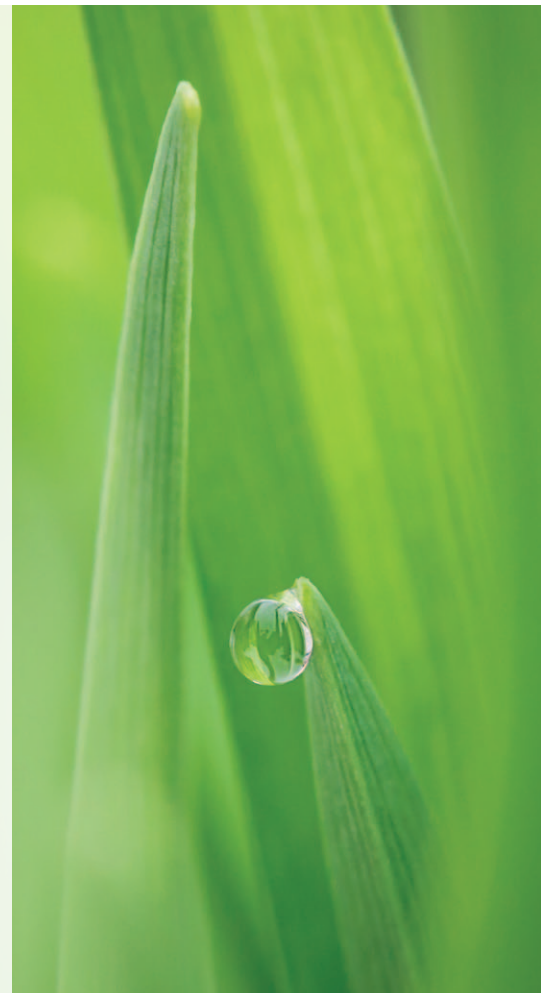

Maceration and Odour: Matrix dressings have excellent structural integrity when exposed to exudate. This is held within the wound margin, reducing the risk of maceration and minimising wound odour .

Ordering information:

Product type	Quantity	Size	Order number
Principelle Matrix	10 dressings	10 x 10cm	PPM1010
Principelle Matrix Border	10 dressings	10 x 10cm (Island 6.8x6.8cm)	PPM1010B

Principelle Matrix:

- Hydrating and highly absorbent
- Protease modulating through synthetic controller of cellular function
- For acute and chronic wounds
- Can be used in combination with compression therapy
- Border version suitable for fixation and prolonged wear
