

TREATMENT OF A LOCALISED AREA OF DRY, IRRITATED SKIN WITH CELAN SKIN CREAM.

t=0 days

22-03

Adult male presented a specific semi-chronic skin lesion on the right-hand index finger. No allergies or medical conditions are known. The area (1.5 sq. cm) of the lesion is now present for two months. A small ('rice-grain') amount of Celan was applied 3-4 times per day.

Goal of treatment: reduce dry flaky skin, redness and irritation.

Pictures were taken in a controlled environment.

t=14 days

04-04

Skin condition improved significantly: No dry skin visible and no noticeable irritation or redness. Celan is still applied regularly (1-2 per week) to maintain optimal skin condition.

Product used:
Celan Skin cream
(tube 30ml, PPC30)
