Pelsan⁺

Honey-based Skin Care

Skin Regeneration Cream

Pelsan⁺ is a skin regenerator cream developed specially for dehydrated skin resulting from heat and sun exposure or after radiation therapy. The product contains medical grade honey providing a bacteriostatic and mild anti-inflammatory effect. Pelsan⁺ is a powerful moisturizer supporting fast recovery of damaged skin, restoring its normal structural and physiological properties. Pelsan⁺ does not contain metal ions in its composition and can be used regularly throughout radiotherapy.

Indications

- Damaged skin after heat exposure or sun exposure
- Damaged skin after radiation (oncology patients) or laser treatment
- Dry skin

Composition

Pelsan+ has five main substances contributing to its hydrating, anti-inflammatory and bacteriostatic effect. They include: Bisabolol, Jojoba, Karité Butter, Willow extract and Medical Grade Honey.
