

# Principelle Pelsan

## Pelsan Skin Regenerator Cream

**Pelsan** is a skin regenerator cream developed specially for dehydrated skin resulting from heat and sun exposure or after radiation therapy.

**Pelsan** is a powerful moisturizer supporting fast recovery of damaged skin, restoring its normal structural and physiological properties.

**Pelsan** does not contain metal ions in its composition and can be used regularly throughout radiotherapy.

### Indications

- Damaged skin after heat exposure or sun exposure
- Damaged skin after radiation (oncology patients) or laser treatment
- Dry skin

### Composition

Pelsan has four main substances contributing to its anti-inflammatory and hydrating effect. They include: Bisabol, Jojoba, Karité Butter and Willow extract.

- Bisabol** Bisabol is used in dermocosmetics due to its anti-irritant and anti-inflammatory properties, aiding the regeneration of damaged skin.
- Jojoba Oil** Known as a pure and natural moisturizer which easily penetrates the skin. Recovery from dehydration; maintains the skin hydro lipid film and flexibility.
- Karité Butter** Is an excellent emollient that protects the skin and prevents dehydration.
- Willow extract** Has a calming and anti-inflammatory effect and supports skin regeneration.

### Application

- Press the top of the container downward to obtain cream. This prevents contamination of the remaining product.
- Spread the cream thinly and gently until it is completely absorbed.

### Package

150ml / 75ml container, no propellant, mechanical product release without risk of recontamination.
